Subchapter 1.1.: Introduction to computers and programming

Introduction to computers and programming

Computers are machines that can be programmed to carry out a sequence of instructions. Programming is the process of designing those instructions. Programs are written in a particular language which provides a structure for the programmer and uses specific instructions to control the sequence of operations that the computer carries out.

- What are some of the ways you use computers?

Do a brainstorming or create a mind map on how you are actually use computers

Introduction to computers and programming

Here are a few of the most common ways:

- To surf the internet
- To check your email
- To do research for a project
- To play games
- To watch movies or TV shows
- To listen to music
- To work on a document or spreadsheet
- To read the news

Introduction to computers and programming

- What other devices are computers?
- What software have you used?

THANK YOU!
